

OnSolve Risk Intelligence™

**Pinpoint and respond to events that threaten
your organization**

Protect the things that matter with a comprehensive understanding of what's happening in your world. Whether next door or on the other side of the globe, critical events can disrupt your people, places and property. OnSolve Risk Intelligence delivers actionable intelligence so complete and fast it gives you a competitive edge.

Born from a realization that existing tools were inadequate, OnSolve offers the most powerful, purpose-built AI engine available so you and your team can make sense of a turbulent world. Part of the OnSolve Platform for Critical Event Management™, risk intelligence continuously scours a global network of data sources to provide validated intelligence on the full spectrum of critical events — man-made, natural and accidental. The output is then correlated to your business footprint to help you make faster, more informed decisions that lead to positive outcomes.

The worldwide volume of critical events is growing quickly. Companies are increasingly global. Information volumes have expanded exponentially. That's why OnSolve provides a comprehensive toolset to detect events and correlate them to your organizational scope. The result is actionable intelligence communicated to the right people in time to make a real difference. It takes OnSolve artificial intelligence (AI) just seconds to ingest and process massive volumes of data, freeing up your team to respond and protect.

What We Do

Skilled security analysts are still unmatched in their ability to exercise intuition and judgment in response to a developing situation. But all humans have natural shortcomings when it comes to evaluating information.

Detect

OnSolve AI continuously scours a global network of proprietary and publicly available data sources that is continually vetted and verified. Our data sources provide comprehensive coverage on all categories of critical events to help you and your team make more informed decisions. We've successfully taught machines to read the news, ingest sensor data, and scan social media to detect events. Our AI then categorizes each event, places it in time and space, validates accuracy, and rates its severity.

Correlate

OnSolve works with you to define the footprint of your business and identify the things that matter to you. Once OnSolve AI has detected and validated events, it correlates those with your people, places and property as well as other potential influences on your profitability, reputation and success.

Communicate

OnSolve AI seamlessly translates raw data into information; transitions that information into intelligence; then ensures the right people have the right information through our multichannel communication platform and rules engine. OnSolve quickly augments your existing team and capabilities with an infusion of actionable intelligence.

Today, more than 4,000 organizations rely on the power of OnSolve for actionable intelligence and integrated communications. Here are their four primary use cases:

Risk Intelligence

Real-time intelligence and Smart Alerting for designated assets including facilities, travelers, employees, trucks and cargo ships. Critical events are correlated to asset locations and visualized on an interactive web dashboard. Based on what's included in the solution set, Smart Alerts can be delivered via the OnSolve dashboard, email, text and mobile application. Alternatively, OnSolve Risk Intelligence can be consumed via an API feed to your own or licensed applications.

Travel Risk Management

Integrated intelligence with Smart Alerts for travel managers and/or travelers. Includes automated ingestion of itinerary data (PNRs) and pre-travel advisories. Smart Alerts are delivered via the dashboard, email, text and mobile app.

Crisis Communications

Streamlined process for delivering notifications by email, text and/or recorded voice message. Notifications can be set to go out as a "blast" or by using a cascade/escalation protocol. An example is a decision tree that waits for text response before attempting a voice call. Systems also include an option for 2-way notifications that allow for responses from recipients like, "I'm okay" or "I need help."

Global Assistance and Response

Through a network of partners who use our platform, OnSolve offers 24/7 monitoring and on-the-ground response services throughout the world.

Leverage OnSolve platform for critical event management
